

Raised Bed Recommendations

1. Determining the Area of Your Garden

Length x Width x Height * all of these must be in the same unit of measure

Example: 4ft x 4ft x .5ft = 8cuft

Because most bags of soil come in cubic feet measurements, use feet to calculate your measurement.

2. Our Soil Recommendation

Amendment	+	Native Soil
<p>average of 4-5 bags for 4x4 area</p> <p><i>select at least 2 amendments below</i></p> <ul style="list-style-type: none"> Worm Castings Hen Manure Complete Landscape Mix Soil Conditioner 		<p>when native soil is not available, use Barky Beaver Potting Soil or Happy Frog Potting Soil as a substitution</p> <p><i>Key Elements of Native Soil</i></p> <ul style="list-style-type: none"> Density Water Retention Nutrients Microbial Activity

It is important to remember when creating a raised bed over a hard surface (i.e. concrete or wood) your crop possibilities can be limited and soil recommendations vary slightly.
